Accelerate your cloud native transformation journey with CNAP – Cloud Native Acceleration Platform

A code-ready workspace on a container

CNAP (Cloud Native Acceleration Platform) is a concoction of VMware Tanzu offerings and open source software projects. The platform is designed to empower a customer to start the application transformation from day 1 through an end-to-end CaaS workspace.

Loaded with automation, CNAP accelerates cloud native application transformation and aims at improving developer productivity by 35-40%. CNAP is an as-a-service offering with pay-per-use pricing model which helps in limiting financial exposure.

Start your cloud native journey on Day 1 using a code-ready workspace on a container

Key takeaways

Bring it all together

Assess, migrate, and transform legacy workloads to containers, then seamlessly integrate with any cloud database to reduce build and deploy times.

Securely build at scale

Utilize code-ready workspaces and templated development to build modern apps and drive a consistent, enhanced, and secure developer experience

Become truly cloud-native

Operate and secure your infrastructure and modern apps across teams and clouds—underpinned by Wipro's multi-cloud environment
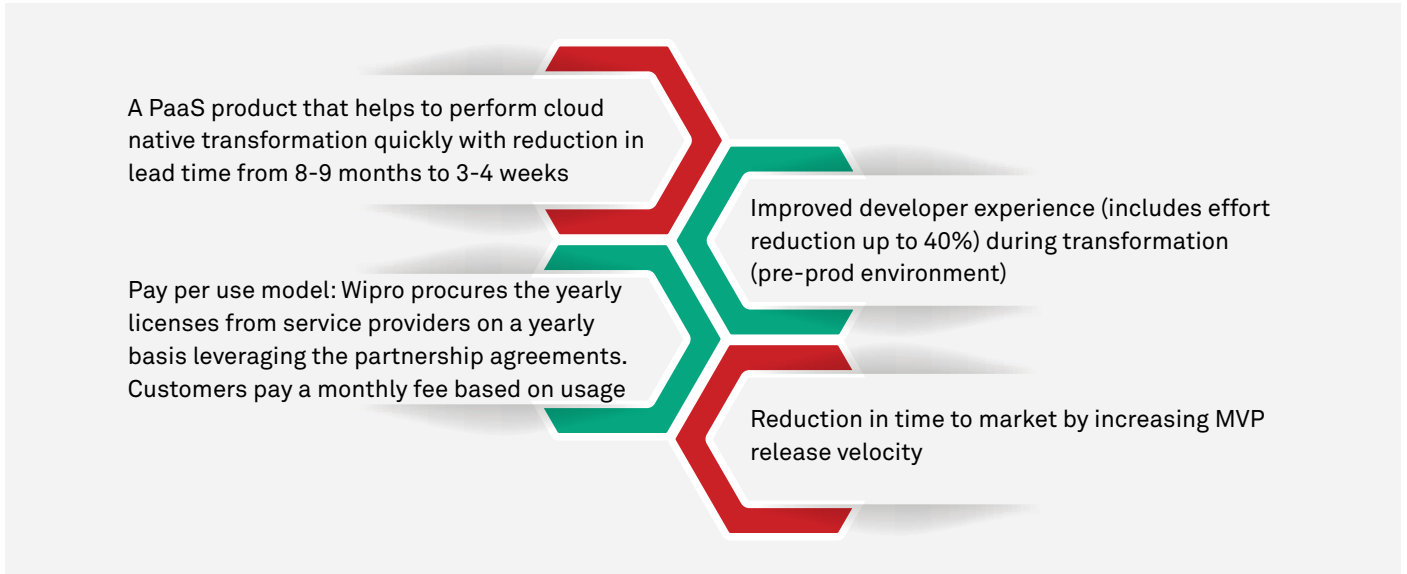

Keep it simple

CNAP UI acts as a single layer of abstraction over underlying k8s complexities

Key benefits

CNAP is built with the sole purpose of enabling customers to start cloud native transformation on Day 1 resulting in the following benefits:

Experience a custom built CNAP through a proof of value.

A PaaS product that helps to perform cloud native transformation quickly with reduction in lead time from 8-9 months to 3-4 weeks

Improved developer experience (includes effort reduction up to 40%) during transformation (pre-prod environment)

Pay per use model: Wipro procures the yearly licenses from service providers on a yearly basis leveraging the partnership agreements. Customers pay a monthly fee based on usage

Reduction in time to market by increasing MVP release velocity

Features

On demand infrastructure provisioning of cloud instances and K8s instances

Abstracted control plane for lifecycle management

Automated code generation for application development

Enterprise-wide observability and Day 2 operations management

Fully configured CI/CD pipeline integrated with a cloud native IDE

Supports hybrid and multi-cloud scenarios

Containerization as a Service

Unique turnkey 'pay-per-use' pre-production development platform enabling flexibility in payments
